CRL

For permanent removal of crowns by breaking the seal between tooth and crown after sectioning with a bur.

Mayo Scissors, SuperCut Stainless Steel, Tungsten Carbide Blades

These are the finest scissors available. They combine the precise cutting action of the razor-sharp SuperCut blades with the durability of Tungsten Carbide. They will provide a clean, smooth cut and retain their sharpness for an extended period of time.

ZARF Oral PLASTIC KIT

ALLENKIT

The ZARF Oral Plastic Kit is provides precision micro-instruments specifically designed for today's minimally invasive soft tissue grafting procedures.

Scissors

Ring Scissors

There are many different varieties of surgical scissors. Some have blunt tips while others have sharp pointed ends. Surgical scissors have either straight or curved blades. Curved blades make some cutting requirements easier to perform. Other types of surgical scissors, like the Mayo scissors, have short cutting blades that are intended for cutting through thick or hard tissue. In contrast, Metzenbaum scissors have extremely long blades for cutting in and around tissue that is more delicate.

Gold handle is an indication the scissors have a tungsten carbide insert, making the cutting surface stronger and more resistant.

Black handle indicates a serrated blade. The serration prevents slippage of the blades and makes a cleaner cut. Also, it can be more easily used left-handed.

A combination of gold and black handles indicates one tungsten insert blade and one serrated blade.
